   This is only useful f you have Defender Pro. What happend was I hadn't played renegade for a while and I reinstalled Defender Pro and it didn't have a rule for allowing renegade protocals. I tried to login with the firewall off but it didn't work. Even though the firewall was off it was executing its proccesses. Then I made a rule for game.exe and game2.exe and bandtest.dll and all that other stuff and it worked. If this problem happens to you but its not a firewall read this:

Quote: I use to get that error. If you're on a router, upgrade the firmware. That helps.Canadacdn

If that won't help then download this tool that I attached at the bottom.
