For linux servers with Core Patch 1 already installed (i.e. brenbot, proper LFDS binary etc),
download and run this
http://download.renguard.com/cp2/sscp2.run (its a shell script with a TGZ file on the end)
For linux server without Core Patch 1, download and run this
http://download.renguard.com/cp2/sscp2all.run
For windows servers with Core Patch 1 already installed, download and run this
http://download.renguard.com/cp2/sscp2w.exe
For windows servers without Core Patch 1, download and run this
http://download.renguard.com/cp2/sscp2allw.exe
The linux installer uses makeself to make the installer and the windows installer uses Nullsoft
Installer (since its my first time with Nullsoft, hopefully I got everything right)

It would be good to see some servers run Core Patch 2 (especially the new maps)

I was unable to figure out how to get the windows installer to add the new maps to svrcfg_cnc.ini
so if you want this, you will have to do it manually

Clients should recieve it downloaded automatically through RenGuard.
A stand-alone non RenGuard installer will be provided as soon as we can.

People with Core Patch 2 Release Candidate 1 can get the new readme file here:
http://download.renguard.com/cp2/readme.txt

Also, clients with Core Patch 2 Release Candidate 1 should download and use
http://download.renguard.com/cp2/mixfiles/game2.zip
if they havent already done so.

Please report any issues with Core Patch 2 on these forums so everything can be kept in the one
place. If it is something that needs to be kept private (e.g. an exploit), private message me with
the information.
Questions are best asked by contacting me through MSN, AIM, ICQ or Yahoo.
