hmm no i didn't try using a no-cd crack.. i've bought the game like 4 or 5 years ago.. and it worked fine.. 2 years ago i've made myself a img. file of the data disk.. so i didn't have to use the cd everytime.. because i heard the renegade cd isn't realy capible with heating and stuff.. and it spinns to fast in dvd drives or fast cd drives.. haven't had this problem befoure anyway..
Is there somewhere to download CP2 manually.. because RG ejects connection when i try download the CP2 patch. (i know.. wrong forum.. but what ever)... btw.. my "everesthome 5.1" *(also known as a newer version of aida32)* sais that AGP isn't enabled.. someone knows how to fix this to?

hope you can help me.. and thnx anyway Goztow

(btw.. i got low fps playing 1024x768 with a nVidia 6600 is this common.. or just some weard error/bug/driver issue?)
