Well, seems that I have learned a thing or two from this topic:

Quote:For example,
10 % 3 = 1
10 % 10 = 0
12 % 5 = 2

I thank you very much for refreshing my memory.

EDIT: Since this is the same subject, I just wanted to let y'all know that when I finish my website, (which is taking forever because it gets boring at times), I will have a complete section on C++ where you can go if you want to learn the basics of C++. It will be pretty explanatory and should be pretty straight foward. When I first learned C++, I pretty much went to my local library, checked out a C++ book, and was writing very basic programs within the hour I started reading.

My object for providing this section on my site, is I am hoping that others interested in C++ can use what I have learned to learn it themselves.
