Can anyone tell me what the problem here could be? It seems to occur just as a building is being destroyed.

I don't know if this is CP2 related. I had Renguard set up to automatically download core patches, and after scanning and detecting errors, this began to happen.

The screenshot shows the Renegade game interface. At the top, a window titled "Renegade" displays a message: "Renegade has encountered a problem and needs to close. We are sorry for the inconvenience." Below this, a "game2.exe - Application Error" dialog box is open, showing a red 'X' icon and the text: "The instruction at '0x005e5f1a' referenced memory at '0x00000000'. The memory could not be 'read'. Click on OK to terminate the program. Click on CANCEL to debug the program." The dialog has "OK" and "Cancel" buttons. In the background, the Renegade interface includes a "RenGuard 1.03" window with a menu: "Com...", "Server List", "Beginner's Guide", "Help", "About RenGuard", "RenGuard.com", and "Support Chat". A "THE PITS" logo is visible on the right. A chat log at the bottom shows: "[16:36] To launch Renegade, please click 'Renegade'. [16:37] You have joined The Pits (renmaps.com). [16:42] You have left server The Pits (renmaps.com). [16:43] You have joined The Pits (renmaps.com). [16:47] You have left server The Pits (renmaps.com)." At the bottom of the interface are buttons for "Renegade", "Options", and "Quit". A status bar at the very bottom reads "RenGuard 1.03 - 472 user(s) on 69 server(s)."
