Renx wrote on Tue, 11 April 2006 13:23Wait, you get the error when you try to logon to WOL?

If that's the case, try going to your renegade dir and renaming woldata.key to woldata0.key

No, it happens whenever I try to startup the game. I get a yes or no question box on whether I should update Renguard or the game or some bullshit, if I click yes or no it displays the same error I mentioned in the first post.
