Hello

In the game I've posted here just needs some work, it kinda sucks. I was wondering if anyone knows this? and could help me(Finish it) for me. Right now it kinda sucks, the walls do not work.

Its pretty simple...In this game i just need to have walls that work, and an object that moves around bouncing off the walls, and when it hits you, you loose a life and have to restart. I just suck with this language thats all.

Thanks very much for any help
