Subject: Error running Renguard
Posted by akumag2 on Fri, 30 Jun 2006 20:05:20 GMT

Ok looks like I'm getting the same issue as everyone else, when I launch renegade with renguard installed i get the error
"renegae has encountered a problem and needs to close".

I uninstalled and reinstalled renguard, didnt work.

I uninstalled renegade & renguard and reinstalled and it didnt work

I formatted my HDD and reinstalled win XP Home (32 not 64). Still the same, yes I have all the latest microsof updates, but are you sure thats the problem.

Now see those microshit patched are there for a reason, hasnt anyone figured out what the issue is and got a work around for it.

I can play renegade launching from gamespy without rengaurd but I can only play on the UNRules servers, and they are always both laggy, and then you get the millions of popups to download rengaurd.

I tried the manual install to and the core patch one manual install, still the same.

Please help you guys gotta get this working, whats the point of buying the game if you cant play it? (oh and mine is the original not the TFD version).
