does rlmon work? i created a simple program that listens on port 3000 and prints out what it gets, i tested this with telnet and it works. so in FDS i typed "rlmon 127.0.0.1:3000" and went to renegade -> to my server typed hello in public chat and nothing showed up in my program. why???
i also tryed "rlmon 0.0.0.0:3000" and "rlmon localhost:3000" but both didn't work.

i have scripts-2.92, latest bhs version.
