it isnt, i checked, it just refuses to connect to the master servers. I uninstalled all the firewalls and disabled the windows firewall and STILL it refuses to connect.

My mistake on insulting the host the other day, I was just in a bad mood, tis all.

But any help would be greatly appricated on this. I can give you my basic computer specs. if needed.

Acer Incorporated
Intel(R)
Celeron(R) CPU 2.93GHz
248MBs of Ram

Microsoft Windows XP
Home Edition
Version 2002
Service Pack 2

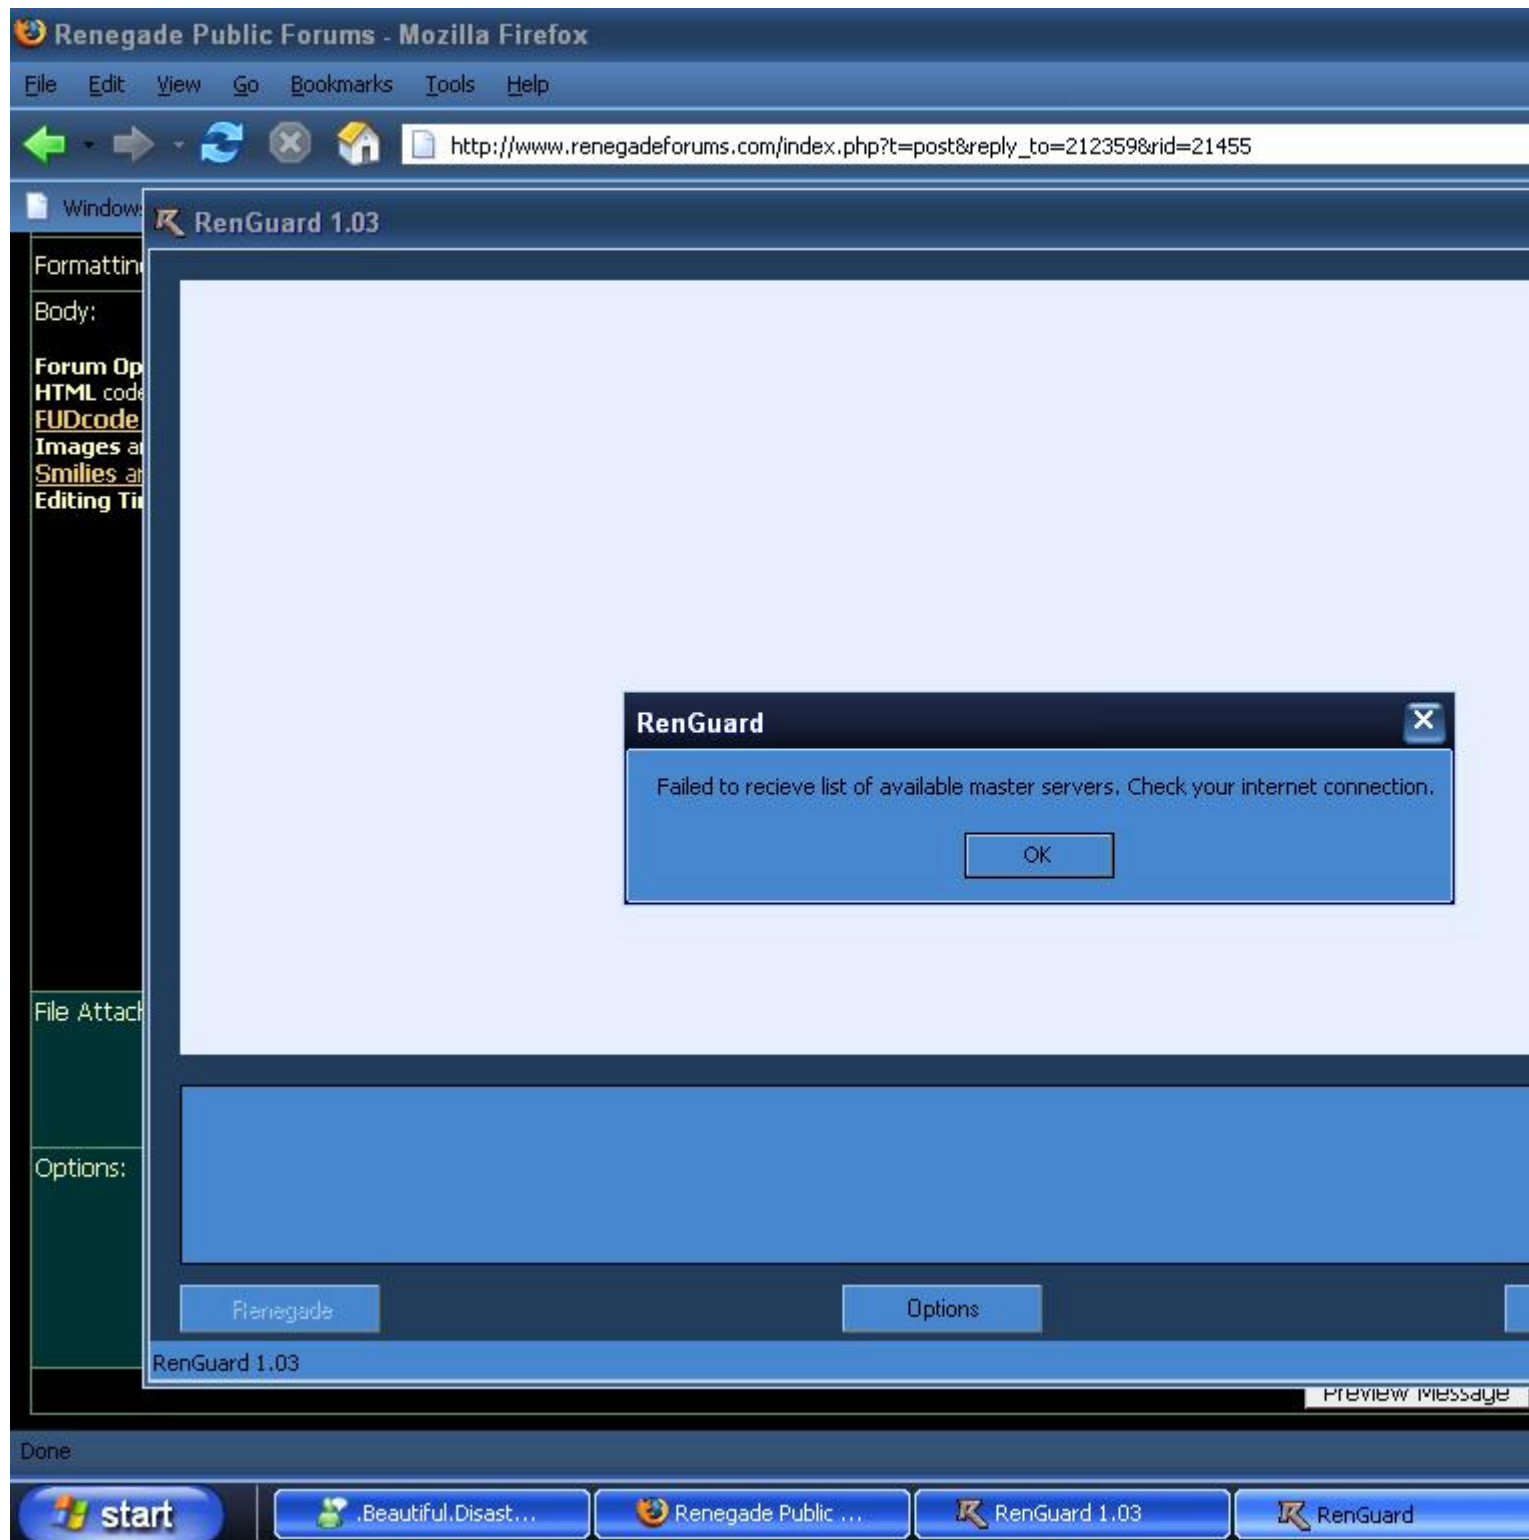

So if thats of any significance, use whatever you need. I'll include a fed screenshots of what results in starting up renguard, and how i disabled my firewall, in the off chance i did it wrong, and how i also approved game.exe and game2.exe to be connected to the internet.
