---

i finally decided to see what cnc and red alert look like, so i uninstalled renegade, then installed cnc and red alert together, then installed renegade (from tfd). but it keeps saying that i've an invalid password. i also tried to put the serial of my original renegade copy, but it's still the same. i know there are lots of topics in these forums about this problem, but it would be great if u can help me on this one. thx.
