You have no idea what you are talking about. If you had any knowledge of ASP.NET and how it works then you would know that that is a client side problem, and not server side. So don't go blaming the clanwars.cc server for a problem that is on your end.

Actually if you had ANY idea what YOU were talking about, you would know that their IIS config file was fucked up and caused the downtime. See Maiden's post you fucking moron.

Okay, I have to correct my own post here. It was a server side problem, but how does that contribute to clanwars.cc being crap? It doesn't. Every server has its problems one day or another, and its people like you who jump on it when these mishaps do happen. clanwars.cc is not crap, and atleast they are contributing to the Renegade community. If it wern't for clanwars.cc, there would not be a decent clan/ladder system. Aside from that, if you really think that clanwars.cc is complete and utter crap, I would love to sit back and watch you create a clan/ladder system like they have and prove to everyone that is, indeed, better.
