not even if 1 million computers worldwide was attacking with all their mite?

He would have to compromise all of those systems first. Which I highly doubt would happen.

"Robo"

well kholdstare is a nerd, he can get someones ip and start ddos it really easily, hes like a superhackernerd

(1) DDoS = Distributed Denial of Service (ie. what HL is talking about above). Not going to happen by some n00bie on these forums. Especially solo. ^^

(2) Like I also said above, just because someone can point and click flood a computer doesn't mean that they're a "superhackernerd". Even giving the person the benefit of the doubt that they are running something command line or through a coordinated IRC kind of thing, that's still pretty easy. I hope you were joking about calling him a hacker. Not to mention a real hacker wouldn't waste their time on petty things such as a game server. Hackers are a dying breed; and most of survivors are just script kiddies with hopes of being l33t.
