Well for a start your server.ini does not have login details for Westwood online setup, although since your running on GSA I don't suppose this matters.

I notice you blanked out your
RemoteAdminPassword

You should check this is exactly 8 digits long, EG abc12345 or something.

RemoteAdminIP = 127.0.0.1
Sometimes this works better left as
RemoteAdminIP =
it seems to vary per server which one works best. For example the tk2 server uses 127.0.0.1, but the snipe server has to have it blank or it cant read ingame chat. Try setting it to blank to see if it works like that, you can always change it back.

Your brenbot.cfg appears to be fine, although you should double check to make sure your paths are right, although they look like they are to me.

Let me know if your still having problems with a blank RemoteAdminIP
