l0ka wrote on Tue, 03 October 2006 14:09I tried putting windows firewall off, however it still doesn't work.
I allowed renegade to make internet connection.
One thing is that sometimes i can start playing, however, after a few seconds it stops.
If you can start playing, it might be that it just allows you to run around a bit but as you don't get data, you will never see other players move.

I've only had this when I was on gamespy and it didn't like my serial but then it gave me an error message "cd authentification failed".
