I've now been running for a week at 30% overclock, with no ill effects. I may try to OC to 3Ghz just to see if it works. I've read reviews of people reaching 4Ghz with normal cooling fans.

Temperature: (Case: 109°F, CPU: 95°F, Fan 1: 337500RPM)

My GPU temperature is:

Ambient temperature: 0° C

Slowdown threshold: 122° C

☐ Continue to log temperature after I leave this page

☐ Notify me if the GPU temperature exceeds the slowdown threshold
