BRenBot and Cloudy don't have nearly as many features as [NR] and are only now catching up to some of the features that [NR] has had for awhile.  Additionally, [NR] has a GUI for those "long INI files" which is not meant for manually editing unless, of course, you prefer to.

I'm really impressed with Nightma12's work on this bot and he puts a lot of effort into it.  I'm trying to convince him to let me make a .net version which should make it 3X's as reliable and efficient. *cough*Lee*cough*
