StealthEye wrote on Mon, 16 October 2006 04:01I would not make it a GUI. The only thing you should be doing with a GUI here might be to make a extra config utility. If they are two separate programs it's ok, but I'd rather just keep it command line. Easier to develop, quicker to configure (assuming the config files are self explanatory).

Agreed, thats what I was doing with my programs I created after I learnt C++ and moved from VB.net
