Some of you might know, I have been collecting stats on all the servers on the RenGuard network. The stats include your max player count and the current number of players in your server.

This spreadsheet is compiled from data from September 8th, 2006 until today. It lists the average player count in your server and the resulting percentage utilization of your server. (Example, if your server averages 8 players out of 16, then you have 50% utilization.

Please note that if you changed the name of your server then your data got split up into each name and I'll have to hand-compile your actual figure if you want it.

Also, please note that this ONLY works for servers on the RenGuard network. I don't collect stats for non-RG servers.

For reference, the top 10 servers for player population are:

| name | avg(s.players) | max_players | percentage |
|--------------------------------|----------------|-------------|-------------|
| n00bstories.com AOW/CCM | 37.6384 | 40 | 94.096 |
| n00bless.com All Out War | 24.3332 | 32 | 76.04125 |
| Jelly-Server [Mini AOW] | 13.5967 | 20 | 67.9835 |
| www.Jelly-Server.com | 25.4081 | 42 | 60.49547619 |
| -=[DW War Sniper]=- | 5.1000 | 10 | 51 |
| Fnfall's AOW Server | 17.9662 | 36 | 49.90611111 |
| ~XpHaZe Marathon~ | 15.6052 | 32 | 48.76625 |
| [DS] Black-Cell.net - Marathon | 15.5245 | 32 | 48.5140625 |
| -=[DW Train Server]=- | 4.7652 | 10 | 47.652 |
| -=[DW War Server]=- | 5.1883 | 12 | 43.23583333 |

(I removed from consideration those servers that look like they weren't up for very long and therefore had skewed ratings. I'll probably run my query again with a record count so I know for sure which results are reliable.)
