Some of you might know, I have been collecting stats on all the servers on the RenGuard network. The stats include your max player count and the current number of players in your server.

This spreadsheet is compiled from data from September 8th, 2006 until today. It lists the average player count in your server and the resulting percentage utilization of your server. (Example, if your server averages 8 players out of 16, then you have 50% utilization.

Please note that if you changed the name of your server then your data got split up into each name and I'll have to hand-compile your actual figure if you want it.

Also, please note that this ONLY works for servers on the RenGuard network. I don't collect stats for non-RG servers.

For reference, the top 10 servers for player population are:

name	avg(s.players)	max_players	percentage
n00bstories.com AOW/CCM	37.6384	40	94.096
n00bless.com All Out War	24.3332	32	76.04125
Jelly-Server [Mini AOW]	13.5967	20	67.9835
www.Jelly-Server.com	25.4081	42	60.49547619
=[DW War Sniper]=-	5.1000	10	51
Fnfall's AOW Server	17.9662	36	49.90611111
~XpHaZe Marathon~	15.6052	32	48.76625
[DS] Black-Cell.net - Marathon	15.5245	32	48.5140625
=[DW Train Server]=-	4.7652	10	47.652
=[DW War Server]=-	5.1883	12	43.23583333

(I removed from consideration those servers that look like they weren't up for very long and therefore had skewed ratings. I'll probably run my query again with a record count so I know for sure which results are reliable.)
