I play 44 person servers (ren-ladder 2 and ren ladder Marathon) I just recently upgraded my pc with more ram, went from 256 ram to 1gb and reformated my computer (had some spyware issues before) anyway I used to get around 30 fps before and now i get between 10 - 15. New ram shouldent hurt my computer. I have the cp's and wondered if that maybe the issue or if its somthing else. Anyones tips and hints are welcome. I have a Radeon 9600 512 mb video card so thats not the issue. I play Battlefield2142 lag less or little lag and this just doesnt make any sense to me! Help please!!
