AfghanOK I have gmax and renegade tools installer installed. my gmax is installed in c:\gmax. my renegade tools installer is installed in c:\program files\renegadetoolsinstaller. when i try to run RenX it says: The objuect that 'C:\WINDOWS\Desktop\RenX.Ink' refers to has been removed or is unaccesible. In the tools setup when it asks to verify the location of the gmax folder i put down C:\gmax. Can anybody help me asap.

un-install the tools installer2 and reinstall it, but install it in C:\gmax
and let it do it's thing.
