---

I have had a recent computer upgrade and had to re-load my sytem (doh') but now having downloaded everthing and running server pack 2 I find that to play Renegade I can not use Rengaurd! Without RG in system I can start ,play and everything but on TRYING to install RG I get told (A) must go to C:\westwood\renegade\directory this I do and the same message comes up?? However after all that and then trying to play I put the discs in and it's start screen comes up then desktop and that is it can't get anything again! reloaded 3 times and currently running c4kitty skins (as b4)and NO RG ! I do not have cheats but get SICK of the RG user reminders can you aid in getting the system to accept RG and allowing to run on all servers please ? Thxx in advance team , Naddie !
