thanks for the advice Goztow, this is a fairly small project. and when its finished i should be able to start coding the Seye alot faster and easier. i want the Seye to work as a "client" to the Sbot. so:

1) you set up a server with the sbot and mine+Nightma12's mod.
2) you tell a load of people your ipaddress
3) those people who have the Seye, just type in that ipaddress and the Seye with talk to the Sbot which will send all the player info to it.
