The alt-tab crash still occurred even with Xfire turned off, so it's not caused by that. So far it has happened every time I have tried to alt-tab.

System specs; Pentium 4 3.0ghz +HT 1024mb RAM Radeon 9800se 128mb

Software;

Catalyst Control Center 1.2.2243.38605 Graphics Driver Version: 8.231.0.0

DirectX December 06 redist

EDIT: Also attached a crash-dump from when I tried it with xfire turned off, incase it helps at all.
