yes, It is doing the same thing for me, Minimizing and crashing on maximize.

I believe that the problem is in the updated ID3DXEffect instances.

Cause I remember a while ago when that other D3d9 thing that allowed renegade to use DX9.0c did the exact same thing to me. (I forgot what the site was called)

EDIT: I tried that Single player crash that was happening after The M01 movie, and it is still happening.

I Tried skipping the movie by pushing ESC, but it still crashed.
I even tried loading a previous save. No luck.
