Ok, i thought i would give an update on the Sbot.

First of all, im doing in GUI. like NR. Second of all, its going to be like BR - decret, uses low memory. its also going to be like NR, very cusomisable and has lots of commands to offer. Your thinking, is he mad!? a GUI, well. i got a way of desroying the GUI and leaving the program running. so when you want to edit anything inGame yo just bring the GUI back and there you have it. when you want to leave it, just minimise it and its using low memory. At the moment, withough any code (just the GUI) it uses 1.5Mb of RAM minimized.

The screenshot shows the Windows Task Manager, 'Processes' tab, with 'Sbot.exe' highlighted. The memory usage for Sbot.exe is significantly lower than in the previous screenshot.
