Alright..

Iv'e posted on steampowered.com forums for help on this, No help was available. I thought I take a random luck shot in this topic.

When I got my ATi Radeon X550, It handled Counter Strike: Source fine.

After a few weeks, On the pacific map cs_office CS: S Just started randomly crashing my pc. Nothing I could do, CTRL + ALT + DEl = Memory crash (Something like that) The screen froze on Counter Strike: Source and the last sound that was played was repeatedly played, So if the last sound was a bang from a nade, all you would hear was "bang bang bang bang bang" noises.

After a few days of trying to find out what the problem was, I joined a de_dust2 server, After that map finished, It was loading cs_office, CS: S Crashed to my desktop and showed me a error message.

I logged into steampowered.com and searched the error message I got. on there FAQ a list of "Graphics card error solutions" and "Sound card error solutions" where listed.

After reading a few, Because I didn't close that error message, My whole pc crashed, So I had to restart by the button on my pc obviously losing the FAQ page.

My pc specs are

AMD Athlon 64 Processor

3200+
994MHz 512MB of RAM.

M$ Windows XP SP2 Version 2002.

I hope anyone can help me fix my problem, Thanks in advance for any help provided.

EDIT: Iv'e tryed uninstalling CS: S completely, and reinstalling, No luck.

Also, After a few weeks, When it's on one map, Then loads up cs_office, I don't crash to my desktop, But after 30 secs into that map, My pc just crashes.
