Thanks guys, the PC is now virus free.

I was instructed to disconnect from the Net, disable "system restore" then do a new scan. Apparently the worm/virus has found a way to hide in any previous "system restores", by disabling restore, the PC removes ALL restore points and the virus has nothing to attach to.

ZA, AVG, Spybot, Adaware and Spysubtract have all deemed the PC infection free.

This has been done in layman terms, I hope it helps others, just as you have both helped me.
