Ok, so this was strange as something else. I was using my computer surfing the net no problems. I looked at the clock, "OMG 5:00 I GOT TO GET READY FOR WORK!"

I turn my computer off goes off normally, I got to work and come home, have a shower and a snack, come down to play games. COMPUTER DOSE NOT START! Fans do not even turn on WTFWTFWTF! I was freakin out so I started messing with stuff and still nothing. I start taking things out and putting them back in 1 by 1 and when I get to my memory, it was not loose or anything, I take it out put it back in the same spot. BAM computer is now working like nothing happened?

So... what the fuck just happened?
