Subject: Weird Problem
Posted by trooprm02 on Tue, 20 Mar 2007 00:10:46 GMT

Well I recently bought out another rental server and I have been having some problems so I have a few questions.

1)basically, the server set up went fine, it connnects etc, shows on agl but the problem is that right when I join its gameplay pending and it does nothing.

2)when I leave I get the unable to join channel bug.

Ive never seen anything like this before so if anyone has a clue what could be causing it to show gameplay pending and "connection to server disrupted" right upon join, sharing it would be helpful. I have scripts 3.1.3, SSGM B1, BR 1.51 Beta, FDSweb, BIATCH installed.
