I have just extracted 383 Icons from past C&C games that might make cool avatars. I have zipped them up, i'll see if Crimson wants to use them for the forums. They are only 64*48 in size but they may work. I have extracted them from Redalert 1, Redalert 2, Redalert 2 Yuri's Revenge, and also Tiberian Sun. Some of them are pretty cool.

I couldn't extract the icons from Counterstrike or Aftermath as i was unable to find the MIX file with them in, there probably locatied inside the RTPatch file that patches the game though, There would only have been 10 or so though. I couldn't get any from Firestorm as i don't have the game and also i have the DOS version of C&C 1 and the icons look bad, could do with C&C 95 or C&C Gold to extract them.
