First, may I suggest .jpg image files? My bandwith is limited, not helped by ~1400 MB of Linux Installer images (I needed the other disk, apparently..)

Next - Wrong subforum, try the "Win32 FDS" subforum. For NightRegulator support, try www.aohost.co.uk (I think) or Contact Nightma12 by PM on these forums.

Next - From that screenshot, it would appear you haven't set up NR's FDS log path reading bit properly. Try going through all your config files (or settings tabs, I'm far too used to BR) and making sure all the settings are correct.
