Right, plenty of potential causes:

C:\westwood\renegade\game2.exe

^ = Renegade without Renguard, see if that works.

If it doesn't, look for a file named d3d9.dll within C:\westwood\renegade\

if this file is there, delete it and try to load Renegade again.

--OR--

Person who reinstalled Renegade, did you patch Renegade to Version 1.037 first?

Finally, moaning about people not being on here 24/7 won't get you anywhere, and if you say
Renguard is "crappy" we all eagerly await your, own and personal flawless substitute.
