Hello Renguard peeps,

My renguard downloaded yesterday a quick patch - I did not pay attention - the result was/is an error code 0000005 and no game play at all - any ideas for me to get back to playing with renguard rather than game2.exe?

Vista Ultimate 32 - SLI nVidia 7800GT and two gig ram with AMD 4400 - if this helps at all?

Keep up the good work chums.

Regards,

raf
