Just objects.ddb? Nothing else? Not by passable, to the extent of ASM hacks? What about WriteProcessMemory and ReadProcessMemory? If so, i take it up. Although, it wont prove anything.

Does it have to be a first attempt? Can i patch it if you find a bypass? Do i have a time limit? Do i have a time limit finding a patch?

EDIT: Can i ask why i am banned from the Win32 FDS forum? Has nothing to do with RG :S
