make it spawn the preset for a stealth tank in one of the lines, I'm not sure, i'm starting to code ssgm too, and sorry I cant release the source for the old mods i want to use in ssgm, I was told not to because they were custom, the only reason I have it is to help with ssgm coding for building dmg and other mods.

One thing i got to work though was kane crate, ion crate, and petrova crate, but those all i did was edit presets and all, not much scripting there....
