Small update, try this:

in c:\windows\system32\drivers\etc\ -> open the file 'hosts' with notepad and add to the bottom:

195.13.63.187 irc.westwood.com
195.13.63.187 servserv.westwood.com

Then try to connect again. If it doesn't work, then restore teh file to its original content.
