I can easily make my own PC, the only thing this topic shows is that i know nothing about on board VGA which is Software, not hardware.
Quote:Ok do this:

Press the windows key (Inbetween ctrl and alt) and pause/break key > Hardware > Device Manager > Display Adapters > Intel (whatever it says) > Driver. Take a screenshot of that window for me please.

I know that this computer is crap, and i need to buy a new card, but that will all happen in a few months. It has a rate of 40fps while at 1152x864 with all detail settings set to their lowest exept the texture detail set to its highest, that is during a normal or SP game, 20fps in a graphic-intense game or level, 30fps in roleplay2. I dont want a graphics card just yet, and by the time i get one those there will be a better card at the same price.

All i want to know is what graphics driver/on board VGA driver to use At this date.
