My renegade randomly crashes, sometimes to desktop (<-- Happens most of the time) and sometimes crashes and I have to reboot (<-- 10%) this happens sometimes 3 times in 10 minutes, and sometimes once in 3 games. I have info from crashdump.txt, but i have no idea what any of it means. This has been happening for quite a while now. I've tryed many different drivers for my video card, and none of them have fixed the problem. I'll attach the crashdump.txt, and if someone takes the time to read it, thank you very much.
