Status update

@IronWarrior: What do you mean with 'They can't re-crate the map using the .lvl file.'?

@PaRaDoX: Mesh names can be changed. That wouldn't be a good protection.

ToDo:

Finish GUI.

Assign waypath to their correct preset (if possible).

Import custom scripts.dll, if present.

Add protections for mappers who don't want their map to be converted.

Does anybody have a better name than 'LevelRedit'?

Here a little GUI teaser (that's my second GUI ever made with C++/MFC and the last one was years ago)
