I am gonna use the Harvester script, you know the one that lets you harvest ore and take it back to the refinery. I was wondering is there a script that destroys a vech if there is no one in it? Like someone on nod drives the NOD harvy and then they get out so it destroys it. Or is there a script that even when someone gets out of the NOD/GDI harvy it still stays with that team so that the other team can't steal the harvy?
