Fake.

There is no .wav for the stealth itself.
There is no way to make sinks or sbh use the sound unless it is recoded.
Clientside mods cant be coded to much, or too different than what other players use or else it wont show the server list.

Then again I may be wrong, post it then, and proove me wrong. I would like to use this instead then.

But then Why am i listening to a person who just starting renegade and joined the modding community?
