For fucks sake.

HI GUYS THIS IS ME USING A MAC, PLAYING GAMES ON IT AND RIGHT CLICKING ON IT EVEN WITH THE MOUSE IT CAME WITH. THIS IS ALSO ME ENJOYING AN OPERATING SYSTEM THAT ISN'T BLOATED WITH BULLSHIT OR FEATURES. THIS IS ALSO ME BEING ABLE TO ENJOY FULL 64 BIT WITHOUT COMPROMISE WHILE ALL YOU DOUCHEBAGS ARE STUCK WITH 32 BIT OR 64 WITH PLENTY OF COMPROMISES.

I didn't fucking chose to switch, but Jesus fucking Christ Windows is a retarded operating system designed for penny pinching retards that believe they're getting a good deal.

DUR DUR DUR I'M USING WINDOWS BECAUSE YOU CAN'T GAME AND RIGHT CLICK ON MACS DUR DUR DUR I HAVE NO IDEA WHAT I'M TALKING ABOUT DUR DUR DUR YES MR BALLMER YOU MAY TAKE A SHIT IN MY MOUTH NO STEVE JOBS I WILL NOT SWITCH BECAUSE I FEAR CHANGE AND SIMPLICITY.

Of course I'm getting Leopard for free, because y'know, Apple is that cool and gives it for free to people who got their Macs about a week prior to a new OS's release.

Oh yeah, we get fucking Microsoft Office and it fucking pounds your asses on OSX (YES GUYS, MICROSOFT HAS A TEAM OF PEOPLE DEVELOPING SOFTWARE FOR CUPPERTINO'S OPERATING SYSTEMS, FUCKING AMAZING UH? NEED I REMIND YOU THAT ALL THE 360 DEMOS YOU SAW BEFORE THE SYSTEM WAS UNVEILED WERE RUNNING ON G5-POWERED MACS? OH LAWD INFERIOR PRODUCTS ETC.)

(no, OSX is not perfect/flawless, nor is it free of viruses (but they're a lot less common, same applies to exploit, and you can argue it's because the userbase isn't large enough to be "hackworthy", okay, whatever floats your boat guys, why would hackers want to let Apple spread these "horrific lies" is beyond me) but you guys need to fucking inform yourselves before spouting uneducated bullshit out of your collective assholes that you dare to call mouths).

I can only fucking wonder why Firewire 800 and 400 aren't common standards... Oh yeah, because Apple made it so we're mostly stuck with Intel's shitty USB 2.0 (3.0 is coming soon and it doesn't even come close to F400 yet, AFAICR).

(yes, I still enjoy building computers and all, but when it comes to pre-built stuff, I can only recommend HP and Apple, but I wish Apple would come up with a midrange non-all-in-one and therefore not laptop-based computer to compete with the likes of Dell and others, a lot of people think the iMac is a monitor and there's a tower hiding behind it or something)

More at 11.

Oh yeah, Mero: how is 10.4 being "gay" on you exactly?
