The PC isn't the closest... it IS.

You can go anywhere and buy Console to USB controller cords. I have a PS2 converter actually. I've also seen gamecube, and N64 ones too.

The Xbox360's controllers are USB connected. And Wii uses Bluetooth and can be configured for a PC.

You also have games made only for PC, games ported from consoles, and console emulators.

The PC is a console in itself!
