Ok, i have absolutely no idea on Earth how but my NR works....i just Turned it off one night and loaded it the next day and it worked! It's like a freak of nature or something
I just messed about with the Directory's and went a bit mad before i turned it off!
Anyways thanks for all of your ideas, although im curios, NR isn't the only Server management program is it? I have seen things like (BrenBot) (CI) (drangonServ)
NR isn't that good, it's hard to manage the Moderators and it just a bit of a mess to setup + there are certain things i cannot change like wether SBH Snipers are allowed(Currently there not and i want em to be)

So please can you provide me with some info on what's new and different from that of NR and how i could acquire these Management programs like (DragonServ) etc

Thnx...
