Okay a superb suggestion(Get Renguard) and so simple...apparently!
I mean if i have Renguard i can play on certain servers my bro can't thusly im safe from him haxoring away and gettin me banned + people can never say that i hax if i get banned via I.P because i have Renguard which is an Anti-Cheat program

But a few questions first

#1:Doesn't it conflict with your own server, especially when modded

#2:Does it conflict with any mod you where to make for LAN or FDS?

#3:I've heard from certain people that Renguard makes your server lag

4#:Does it have many or any technical issues, e.g Virus detection software thinking it's Malware etc?
