Is there another way to change anti aliasing and vsync? cos i cant change it back through renegade
Maybe someone could upload their bhs.dll with default settings so i could try to put that one in my folder and see if it works?

I already got it fixed by installing older version 2.9.2 it works again.
But now there is no way to get my fps higher then 60? cos i cant put off vsync??
Putting off vsync is useless anyway. Your screen can't process more FPS than its refresh rate. Putting vsyn off doesn't give you any advantage.
