Matix101 wrote on Mon, 26 November 2007 18:49danpual is a fucking noob and when you install BR, he forgot to make the installer make a file.

In your FDS directory (inside /Server/) make a folder called

"log" and inside that folder make a folder called "biatch" and inside that folder create a text file under the name of "main.txt"

Knp

I did exactly what you said and while it no longer shows that error, the FDS just exist upon loading. In the screen shot it looks all good and well but shortly after just exits/crashes.

I have made sure all the information is the same between both the server.ini and the BRenbot.ini.

Server.ini

AllowRemoteAdmin = true
RemoteAdminPassword = Not for you to know
RemoteAdminIP = 127.0.0.1
RemoteAdminPort = 4949

BRenbot.ini

RenRemLinuxHost = 127.0.0.1
RenRemLinuxPort = 4949
RenRemLinuxPassword = Not for you to know

I saw somewhere to leave the IP blank, but when I did that BRenbot complained
