17:49danpual is a fucking noob and when you install BR, he forgot to make the installer make a
file.

In your FDS directory (inside /Server/) make a folder called

"log" and inside that folder make a folder called "biatch" and inside that folder create a text file
under the name of "main.txt"

Knp

Don't post complaints about a good program...

Anyway, on topic...

@Kioshin18: make sure that you have set up the RemoteAdmin stuff in brenbot.cfg and server.ini.
(Make sure they're the same...) If they are already, then I don't know what the problem is... :\

~MathK1LL

My reply was quite helpful and more "on-topic" then yours.

And I never complaimed about BR, I find it excellent. I find danpaul a nubcake for making his
installer have quite a few problems.

Like when you install BR, brloader keeps updating the same shit, cause of a certain file mishap or
whatever, and then IPBot trying to connect to the database but it says "invalid password"

It only adds up.
